

# Procurement Payments

A Guide to the Dataset

September 2026

---

## 1. Overview

---

This dataset provides records of public procurement payments made to civil society organisations — including registered charities, community interest companies, co-operatives, and other third sector bodies — across the United Kingdom. It was produced by the [UK Third and Civil Society Sector Database \(https://uk-third-sector-database.github.io/\)](https://uk-third-sector-database.github.io/) project, which collects, processes, and links public administrative data on civil society organisations throughout the UK.

The data is drawn from three open data sources: central government transparency spending data, NHS payment records, and Contracts Finder awarded contract notices. Each payment record links a public sector funder to a civil society supplier, providing a detailed picture of how public money flows to the third sector through procurement and commissioning.

The dataset contains 874,819 payment records covering 11,573 organisations and 1,418 public funders, spanning the period from 2010 to 2025 and totalling £145.3 billion. Together, these records offer a comprehensive view of the scale, distribution, and evolution of public procurement relationships with civil society across the UK.

**874,819**

**2010–2025**

Years Covered

**Related dataset.** This guide covers the **payments** dataset ( `cso-procurement-dataset-refined.csv` ): one row per payment or award made to a register-confirmed civil society organisation. The project also publishes a companion **Contracts Finder** dataset ( `contractsfinder-enriched-refined.csv` ) — one row per awarded contract notice on Contracts Finder, covering contracts awarded to *all* suppliers with civil society organisations identified by a register match, plus the contract title, description, sector codes, estimated and awarded values and dates. Use the payments dataset to measure money paid to civil society over time; use the Contracts Finder dataset to study the contract market (what was tendered, who won, civil society's share) and to test the buyer's voluntary-sector flags. The Contracts Finder dataset has its own guide: [Contracts Finder Records — A Guide to the Dataset](https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html) (<https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html>).

## 2. What are Procurement Records?

---

UK public bodies are required to publish details of their spending over certain thresholds as part of government transparency commitments. This dataset draws from three open data initiatives that collect and standardise these spending records, filtered to include only payments made to civil society organisations identified in the TCSS Organisation Register.

### Central Government Spending

UK government departments publish monthly CSV files of all transactions exceeding £25,000 as part of HM Government's spending transparency commitments. These files are collected and harmonised by the [centgovspend](https://github.com/crahal/centgovspend) (<https://github.com/crahal/centgovspend>) project, which aggregates and cleans thousands of files from ministerial and non-ministerial departments for consistency and quality controls. Central government spending accounts for 90.9% of the records in this dataset.

### NHS Spending

Payment records from NHS Trusts and Clinical Commissioning Groups (CCGs) are collected by the [NHSSpend](https://github.com/crahal/NHSSpend) (<https://github.com/crahal/NHSSpend>) project. This covers payments exceeding £25,000 made by NHS institutions across England, spanning January 2010 to March 2020 when data collection concluded. NHS spending accounts for 7.1% of records.

### Contracts Finder

[Contracts Finder](https://www.contractsfinder.service.gov.uk/) (<https://www.contractsfinder.service.gov.uk/>) is the UK government's online portal for public sector procurement opportunities and awarded contracts. Awarded contract notices are scraped by the TCSS project's own [Contracts Finder collector](https://github.com/uk-third-sector-database/contracts_finder) ([https://github.com/uk-third-sector-database/contracts\\_finder](https://github.com/uk-third-sector-database/contracts_finder)). Unlike the payment-level data from the other two sources, Contracts Finder provides contract-level information (awarded amounts and dates), so each Contracts Finder row in this dataset is an awarded contract value rather than a cash payment. These records account for 1.9% of the dataset (16,940 rows). The full contract-level data, including contracts awarded to non-civil-society suppliers, is published separately — see the [Contracts Finder Records guide](https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html) (<https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html>).

### 3. Dataset Contents

The dataset is supplied as a single CSV file, `cso-procurement-dataset-refined.csv` , containing 874,819 records across 18 fields. Each row represents a single payment from a public sector funder to a civil society organisation. The fields are organised into four groups: identifiers, payment details, funder information, and summary statistics.

#### Identifiers & Organisation Info

| Field                | Description                                                                                                                   | Type    | Coverage |
|----------------------|-------------------------------------------------------------------------------------------------------------------------------|---------|----------|
| uid                  | Unique organisation identifier from the TCSS Organisation Register (e.g., GB-COH-12345678 , GB-CHC-1234567 , GB-SC-SC012345 ) | Text    | 100%     |
| organisation_name    | Organisation name as recorded in the source data                                                                              | Text    | 91.6%    |
| supplier_id          | Internal supplier identifier assigned during pipeline processing (e.g., S192664 )                                             | Text    | 100%     |
| supplier_type        | Organisation type: Charity , CIC , Co-operative/Mutual , or Other CSO                                                         | Text    | 100%     |
| supplier_type_detail | A more granular supplier classification, refining supplier_type                                                               | Text    | 100%     |
| is_multi_supplier    | Indicates whether the source record named more than one supplier ( True / False )                                             | Boolean | 100%     |

#### Payment Details

| Field        | Description                                                                              | Type    | Coverage |
|--------------|------------------------------------------------------------------------------------------|---------|----------|
| payment_year | Calendar year of the payment                                                             | Numeric | 100%     |
| payment_date | Date of payment ( YYYY-MM-DD format)                                                     | Date    | 100%     |
| amount       | Payment amount in pounds sterling (£); negative values indicate reversals or corrections | Numeric | 100%     |
| data_source  | Source dataset: Central Government , NHSSpend , Contracts Finder , or contractsfinder    | Text    | 100%     |

#### Funder Information

| Field              | Description                                                                                                                                                                                         | Type | Coverage               |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|------------------------|
| funder_name        | Canonical funder name (uppercase)                                                                                                                                                                   | Text | {S['cov_funder_name']} |
| funder_name_alt    | Alternative funder name, where applicable                                                                                                                                                           | Text | 1.0%                   |
| funder_id          | Unique funder identifier (e.g., F02683 ). Missing (together with funder_name ) for 14 records whose funder is classified Junk/Invalid                                                               | Text | >99.9%                 |
| funder_type        | Funder classification: UK Government , NHS , Local Government , Education Institution , CSO , Police, Fire and Rescue , Private Sector , Other , or Junk/Invalid (see <a href="#">Appendix A2</a> ) | Text | 100%                   |
| funder_type_detail | A more granular funder classification, refining funder_type (for example, distinguishing types of body within UK Government)                                                                        | Text | 100%                   |

| Field           | Description                                   | Type | Coverage |
|-----------------|-----------------------------------------------|------|----------|
| funder_type_alt | Classification of the alternative funder name | Text | 1.3%     |

**Note:** The `funder_name_alt` and `funder_type_alt` fields are populated only where an alternative funder name was assigned during the classification pipeline. This primarily applies to Contracts Finder funders that were manually refined to their parent Central Government department (e.g., DVSA mapped to DFTRANSPORT).

Summary Statistics

| Field                        | Description                                                                  | Type    | Coverage |
|------------------------------|------------------------------------------------------------------------------|---------|----------|
| total_value_payments_to_org  | Total value of all payments to this organisation across the full dataset (£) | Numeric | 100%     |
| total_number_payments_to_org | Total number of payments to this organisation across the full dataset        | Numeric | 100%     |

4. Coverage & Completeness

Core Field Coverage

The core payment fields — `payment_date` , `amount` , `supplier_id` and `data_source` — are present in every record; `funder_name` and `funder_id` are missing for just 14 records, all classified Junk/Invalid. Every record carries a `uid` — from this release a payment is included only if its supplier is a register-confirmed civil society organisation — and `organisation_name` is present for 91.6% of records (where missing, recover it from the Organisation Register on `uid` ).

Data Source Breakdown

The dataset draws from four data source tags. Central government spending dominates, accounting for 90.9% of all records. Contracts Finder rows (1.9% combined) are awarded-contract values rather than payments.

| Source ( <code>data_source</code> value) | Records | Unique Suppliers | Share |
|------------------------------------------|---------|------------------|-------|
| Central Government                       | 795,465 | 7,763            | 90.9% |
| NHSSpend                                 | 62,414  | 2,108            | 7.1%  |
| Contracts Finder                         | 13,752  | 4,064            | 1.6%  |
| contractsfinder                          | 3,188   | 1,562            | 0.4%  |

**Note:** The `data_source` field distinguishes two Contracts Finder collection batches — `Contracts Finder` and `contractsfinder` — both drawn from the same portal. The “Unique Suppliers” column counts distinct `supplier_id` values within each source; because a supplier may appear in more than one source, these figures do not sum to the dataset total.

## Funder Type Distribution

Funders are classified into nine types (eight substantive types plus a Junk/Invalid catch-all) using a multi-layer cascade (see [Appendix A2](#)). UK Government departments account for the vast majority of records (91.5%).

| Funder Type             | Records | Distinct Funders | Share |
|-------------------------|---------|------------------|-------|
| UK Government           | 800,557 | 175              | 91.5% |
| NHS                     | 64,003  | 509              | 7.3%  |
| Local Government        | 8,185   | 326              | 0.9%  |
| Education Institution   | 786     | 114              | 0.1%  |
| CSO                     | 363     | 119              | <0.1% |
| Police, Fire and Rescue | 331     | 70               | <0.1% |
| Private Sector          | 273     | 47               | <0.1% |
| Other                   | 190     | 42               | <0.1% |
| Junk/Invalid            | 131     | 16               | <0.1% |

## Supplier Type Distribution

Civil society organisations in the dataset are classified by legal form. “Other CSO” includes companies limited by guarantee and other third sector bodies that do not fall into the three specific categories; the `supplier_type_detail` field shows that most of these records (95% of Other CSO rows, 65% of the whole dataset) are payments to education institutions — academy trusts, colleges and universities constituted as nonprofit companies — which should be borne in mind when interpreting totals.

| Supplier Type | Records | Distinct Organisations | Share |
|---------------|---------|------------------------|-------|
| Other CSO     | 605,411 | 3,925                  | 69.2% |
| Charity       | 220,689 | 6,388                  | 25.2% |

| Supplier Type       | Records | Distinct Organisations | Share |
|---------------------|---------|------------------------|-------|
| Co-operative/Mutual | 31,350  | 448                    | 3.6%  |
| CIC                 | 17,369  | 828                    | 2.0%  |

### Year-by-Year Record Counts

Record counts vary substantially by year, reflecting the availability of source data over time. Coverage is strongest between 2012 and 2023.

| Year | Records |
|------|---------|
| 2010 | 5,183   |
| 2011 | 7,991   |
| 2012 | 51,690  |
| 2013 | 115,107 |
| 2014 | 163,241 |
| 2015 | 53,039  |
| 2016 | 29,848  |
| 2017 | 64,185  |
| 2018 | 62,263  |
| 2019 | 65,312  |
| 2020 | 59,773  |
| 2021 | 57,146  |
| 2022 | 62,007  |
| 2023 | 65,711  |
| 2024 | 11,075  |
| 2025 | 1,215   |

**Note:** 33 records fall outside the 2010–2025 range shown above: 7 records dated 2005–2009 that predate the main collection period, 23 records dated 2026 from ongoing collection, and 3 records with implausible years (1900, 2027) caused by source data errors. All are retained in the dataset for transparency; users conducting temporal analysis may wish to filter to the core 2010–2025 range. The 2024 and 2025 figures are also incomplete as source data collection is ongoing.

## Organisation Register Composition

The `uid` prefix indicates which source register each organisation originates from in the TCSS Organisation Register. Companies House registrations dominate, reflecting the large number of companies limited by guarantee and other nonprofit company forms. Every record in this release carries a `uid`.

**Change introduced in the August 2026 release.** Releases up to and including June 2026 also contained 62,175 records (£32.9 billion, 18.2% of value) whose supplier carried a civil society `supplier_type` from the project's earlier name-based classification but no register match; on inspection some of the largest (for example a Scottish health board typed as a charity) were not civil society organisations. From the August 2026 release onwards the rule is *Spine-only*: a supplier is a civil society organisation only if it matches the TCSS Organisation Register (or carries a manually confirmed register identity), so those rows are no longer included and every row has a `uid`. Suppliers demoted by this rule that are in fact civil society organisations will be restored in future releases as they are matched to the Register.

| Prefix  | Source Register                          | Records | Share |
|---------|------------------------------------------|---------|-------|
| GB-COH  | Companies House                          | 622,114 | 71.1% |
| GB-CHC  | Charity Commission for England & Wales   | 196,172 | 22.4% |
| GB-SC   | Office of the Scottish Charity Regulator | 24,537  | 2.8%  |
| GB-COOP | Co-operatives UK                         | 23,247  | 2.7%  |
| GB-MPR  | Mutuals Public Register (FCA)            | 8,103   | 0.9%  |
| GB-SHR  | Scottish Housing Regulator               | 352     | <0.1% |
| GB-NIC  | Charity Commission for Northern Ireland  | 293     | <0.1% |
| GB-SHPE | Social Housing England                   | 1       | <0.1% |

## 5. What Can You Learn?

The procurement dataset enables a wide range of research questions about the relationship between the public sector and civil society in the United Kingdom.

### Research Questions

- **Scale and trends** — How much does the UK government spend with civil society organisations, and how has this changed over time?
- **Funder analysis** — Which government departments and NHS bodies are the largest funders of civil society? How does spending vary across funder types?

- **Sectoral composition** — What types of civil society organisations receive the most public procurement funding — charities, community interest companies, or co-operatives?
- **Concentration** — How concentrated is procurement spending? Do a small number of organisations receive the majority of payments?
- **Cross-sector linkage** — By linking to the TCSS Organisation Register, researchers can explore how procurement recipients differ from the broader civil society population in terms of size, age, location, and industrial classification.

### Example: Mapping UK Civil Society Procurement

The procurement dataset was used in the research report *Mapping and Understanding the UK Civil Society Sector* (McDonnell et al., 2026), which analysed the payment records to characterise the flow of public money to civil society organisations. The report worked from an earlier build of the dataset; the figures and tables below have been recomputed from the current release so that they match the file you download. Key findings:

- **UK Government dominates** — UK Government departments are the largest source of public procurement spend to civil society across all organisation types, accounting for 91.5% of records and £121.6 billion of the £145.3 billion recorded — far ahead of the NHS (£11.6 billion) and local government (£9.2 billion). Note that the Department for Education alone accounts for £79.5 billion, most of it paid to academy trusts and other education bodies classified as “Other CSO”.
- **Charities and other nonprofit companies receive most of the money** — charities receive 37% of total value (25% of records) and “Other CSO” suppliers 56% of value (69% of records); community interest companies and co-operatives/mutuals together receive the remainder.
- **Department-level variation** — analysis at the individual department level reveals substantial variation in how much each department spends with different types of civil society organisation, from health-focused charities receiving NHS payments to social enterprises delivering local government contracts.

The table below shows, for each combination of funder type (rows) and civil society organisation type (columns), the number of distinct organisations paid, the number of payment records, and their total value. Records whose funder was classified Junk/Invalid are excluded.

| Funder type           | Charity          | CIC             | Co-operative/Mutual | Other CSO        |
|-----------------------|------------------|-----------------|---------------------|------------------|
| UK Government         | 4,194 orgs       | 318 orgs        | 253 orgs            | 3,571 orgs       |
|                       | 175,534 payments | 4,000 payments  | 25,182 payments     | 595,841 payments |
|                       | £40,756.1M       | £938.1M         | £1,012.8M           | £78,912.0M       |
| NHS                   | 1,783 orgs       | 267 orgs        | 145 orgs            | 274 orgs         |
|                       | 38,301 payments  | 12,502 payments | 5,348 payments      | 7,852 payments   |
|                       | £5,118.2M        | £4,529.4M       | £916.9M             | £1,049.2M        |
| Local Government      | 1,911 orgs       | 368 orgs        | 169 orgs            | 433 orgs         |
|                       | 5,656 payments   | 706 payments    | 708 payments        | 1,115 payments   |
|                       | £5,816.2M        | £863.8M         | £1,822.2M           | £720.2M          |
| Education Institution | 170 orgs         | 18 orgs         | 11 orgs             | 74 orgs          |
|                       | 398 payments     | 25 payments     | 53 payments         | 310 payments     |
|                       | £77.8M           | £2.4M           | £4.9M               | £41.7M           |
| CSO                   | 148 orgs         | 19 orgs         | 14 orgs             | 65 orgs          |
|                       | 212 payments     | 23 payments     | 24 payments         | 104 payments     |

Table 1: Procurement by funder type and CSO type. Each cell shows the number of organisations, payments, and total value. Source: TCSS Procurement Records (payments), current release.

## UK Government departments by CSO type

Table 2 shows the proportion of each UK Government department's procurement spend with civil society that goes to each organisation type, for the 42 departments and bodies with at least £10 million of such spend. Departments vary considerably in where their procurement is directed. The Department for Culture, Media & Sport and the Department for International Development direct over 90% of their civil society spend to charities, while the Department for Education and the Department for Business & Trade allocate 82% and 74% respectively to other nonprofit companies. The Department for Work & Pensions stands out for relatively high CIC (5.9%) and co-operative/mutual (8.0%) shares compared with most other departments.

| Department / body                                | Charity | CIC   | Co-operative/Mutual | Other CSO | Total to CSOs |
|--------------------------------------------------|---------|-------|---------------------|-----------|---------------|
| Bank of England                                  | 54.7%   | 0.0%  | 0.0%                | 45.3%     | £11.3M        |
| Cabinet Office                                   | 42.7%   | 41.5% | 0.1%                | 15.8%     | £900.6M       |

*Table 2: UK Government department procurement spend by civil society organisation type — proportion of each department's total spend to civil society (%), departments and bodies with at least £10 million of such spend. Department labels follow the research report; the Department for International Trade appears under a single label after merging two source names. Source: TCSS Procurement Records (payments), current release.*

**Tip:** This dataset can be linked to the [TCSS Organisation Register](https://uk-third-sector-database.github.io/guidance/tcss-organisation-register-guidance.html) (<https://uk-third-sector-database.github.io/guidance/tcss-organisation-register-guidance.html>) using the `uid` field, enabling enrichment with organisation characteristics such as location, registration dates, and industrial classification codes. See [Appendix A5](#) for worked examples.

## 6. Limitations & Caveats

---

### Threshold Bias

The source data includes only transactions above £25,000, as mandated by UK government transparency requirements. Smaller payments and grants below this threshold are not captured. This means the dataset over-represents larger contracts and under-represents routine smaller purchases, and total spending figures will understate the true volume of public procurement from civil society.

### Missing Organisation Names

Approximately 8.4% of records lack an `organisation_name` value. These records are still linked to valid organisations through the `uid` and `supplier_id` fields, but the name was not always present in the source spending data. Users can recover organisation names by joining with the [TCSS Organisation Register](https://uk-third-sector-database.github.io/guidance/tcss-organisation-register-guidance.html) (<https://uk-third-sector-database.github.io/guidance/tcss-organisation-register-guidance.html>), on `uid`.

### Year Outliers

A handful of records (3 in total) carry implausible payment years (1900, 2027), resulting from errors in the source data, and a further 7 pre-date 2010. These records are retained for transparency. Users conducting temporal analysis should filter to the core range of 2010–2025, and may also wish to note that the 2024 and 2025 counts are incomplete as source data collection is ongoing.

### Duplicate and Reversal Entries

Some records represent payment corrections or reversals, indicated by negative values in the `amount` field (2,539 records), and 2,067 records carry a zero amount. These are retained to preserve the source data faithfully. Users conducting aggregate analysis should be aware that naïve summation of amounts may overstate or understate totals; consider filtering or handling negative amounts depending on the research question.

### NHS Coverage Gap

The NHSSpend data collection concluded around April 2020. NHS procurement records after this date are not included in the dataset, creating a gap in NHS-specific coverage for 2020 onwards. Central government and Contracts Finder data continue beyond this date.

## Register-Confirmed Membership (Spine-only rule)

From the August 2026 release a payment is included only when its supplier matches the TCSS Organisation Register (every row has a `uid`). Releases up to and including June 2026 also included 62,175 records from 1,131 suppliers (£32.9 billion) typed as civil society by the earlier name-based masterlist without a register match; several of the largest were misclassified public bodies or companies, so totals in those releases and in the June 2026 guidance are not comparable with this release. The other side of the rule is that genuine civil society organisations whose names have not yet been matched to the Register are excluded; they will be added as matching improves.

## Supplier Matching

Organisations in the raw payment data were matched to the TCSS Organisation Register using a combination of exact and fuzzy name matching (Jaro-Winkler similarity, threshold  $\geq 0.90$ ). Some false positives (incorrect matches) and false negatives (missed matches) are possible, particularly for organisations with common or ambiguous names. The alias resolution process (see [Appendix A3](#)) mitigates but does not eliminate this issue.

## Funder Classification

Funders are classified using a multi-layer cascade of metadata signals, external lookups, and keyword rules (see [Appendix A2](#)). While the cascade achieves high accuracy for well-known funder types (NHS, UK Government), edge cases — particularly funders with ambiguous names or those not present in external reference databases — may be misclassified. The `Junk/Invalid` category captures clearly erroneous funder names (16 distinct names, 131 records).

## What's NOT in the Data

The dataset does not include:

- Contract descriptions or service categories (available for Contracts Finder awards in the companion [Contracts Finder Records](#) (<https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html>), dataset)
- Geographic detail of the contract delivery location
- Payments below £25,000
- Payments to organisations not identified in the TCSS Organisation Register
- Procurement from non-civil-society suppliers (private companies, individuals, etc.) — the Contracts Finder Records dataset does include these, for awarded contracts only

| 1.4     | September 2026 | September 2026 data release (874,819 records, 11,573 organisations). Rebuilt on run 6 of the project's refined supplier lookup: generic-name, census-match and legal-form safeguards for name-only register matches (owner rulings D77 to D81, the last holding a match for review when the supplier name states a company form that the register record does not share) and rejection of matches inherited from register records removed before the first award. All figures and tables re-derived. <code>supplier_id</code> values are re-minted each release; use <code>uid</code> to link across releases.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 1.3     | August 2026    | August 2026 data release (883,816 records, 11,886 organisations). Supplier classification now follows the Spine-only rule: a supplier is a civil society organisation only if matched to the TCSS Organisation Register, so the 62,175 previously included records without a <code>uid</code> (£32.9 billion) are removed and every row now carries a <code>uid</code> ; 13 large charities whose register identities were recorded as compound identifiers (e.g. British Red Cross, RNIB, Sense, NatCen) are now correctly classified and included. All figures and tables re-derived. Caution notes about unmatched rows replaced by a description of the rule; the line break inside the <code>Central Government / Contracts Finder</code> source labels is fixed in the data. Supplier identifiers ( <code>supplier_id</code> ) are re-minted each release; use <code>uid</code> to link across releases.                                                                                                                                                                                   |
| 1.2     | August 2026    | Guidance split into two standalone documents: this guide (payments dataset) and a new <a href="https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html">Contracts Finder Records guide</a> ( <a href="https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html">https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html</a> ). Dataset unchanged from the June 2026 release at that point. All figures re-derived from the published file; corrected the source-share percentages in Section 2, the share of records without an organisation name and the counts of implausible years and Junk/Invalid records in Section 6, and replaced the two tables in Section 5 with versions computed from the current data. Documented the line break in the <code>data_source</code> values, the Private Sector funder type, and the unmatched CSO-typed suppliers (no <code>uid</code> ) that inflate value totals. Added a "related dataset" note and a distinct suppliers column to the source table. |
| 1.1     | June 2026      | Refreshed the payments dataset (944,449 records) and refreshed all coverage and distribution figures. Added documentation for the companion contract-level Contracts Finder dataset (now in its own guide).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 1.0     | March 2026     | Initial release of the Procurement Records guidance document and dataset.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

# A1. Pipeline Overview

The procurement dataset is produced by a six-step R preprocessing pipeline that transforms raw spending data into the final linked dataset. The pipeline is orchestrated by a single script ( `run-all-preprocessing-pipeline.R` ) that runs each step in sequence, skipping steps whose inputs have not changed since the last successful run.

## Pipeline Steps

| Step | Script                                      | Purpose                                                                                                                                                                                                                                            |
|------|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1    | <code>02-build-funder-lookup.R</code>       | Classifies the 1,418 unique funders into nine types (eight substantive types plus Junk/Invalid) using a multi-layer cascade of metadata signals, external lookups, and keyword rules. See <a href="#">Appendix A2</a> .                            |
| 2    | <code>03-build-supplier-lookup.R</code>     | Matches supplier names from the raw payment data to the TCSS Organisation Register using exact and fuzzy name matching (Jaro-Winkler, threshold $\geq 0.90$ ). Assigns a <code>uid</code> and <code>supplier_type</code> to each matched supplier. |
| 3    | <code>03a-generate-alias-batches.R</code>   | Identifies potential supplier name aliases — cases where the same organisation appears under different names — using deterministic rules. Generates review batches for manual or LLM-assisted validation.                                          |
| 4    | <code>03b-assemble-alias-decisions.R</code> | Assembles alias decisions from both rule-based determinations and LLM-reviewed batch results into a single validated alias file.                                                                                                                   |
| 5    | <code>03c-apply-alias-merges.R</code>       | Applies validated alias merges to the supplier lookup, consolidating duplicate supplier entries under a single canonical <code>uid</code> .                                                                                                        |
| 6    | <code>04-assemble-final-datasets.R</code>   | Joins funder classifications, supplier lookups, and raw payment data into the final output file. Computes per-organisation summary statistics ( <code>total_value_payments_to_org</code> , <code>total_number_payments_to_org</code> ).            |

**Note:** Steps 3–5 handle the alias review pipeline. In a fully automated run, Step 3 generates candidate batches, but the LLM review must occur externally before Step 4 can assemble decisions. When reviewed batches already exist, all steps run in sequence without manual intervention.

# A2. Funder Classification

Funders are classified into nine types (eight substantive types plus a Junk/Invalid catch-all) using a multi-layer cascade. Classification is applied independently to `funder_name` (producing `funder_type` ) and `funder_name_alt` (producing `funder_type_alt` ). The cascade proceeds in order; the first match wins.

## Classification Cascade

### Pre-filter: Junk/Invalid Detection

Entries with purely numeric names, hash-like strings, or very short names (fewer than 3 meaningful characters) are flagged as `Junk/Invalid` and excluded from subsequent cascade layers. This affects 16 funder names (131 records).

### Layer 1: Metadata Signals

Information already present in the source data is used as the first classification signal:

- Funders from the `NHSSpend` data source are classified as **NHS**
- Funders from the `Central Government` data source are classified as **UK Government**
- The `note` field in the funder masterlist may contain signals such as "ministerial" or "non-ministerial", indicating **UK Government**

### Layer 2: External Lookups

Unclassified funders are matched against two external reference databases:

- findthatcharity** (<https://findthatcharity.uk/>) — a comprehensive lookup of UK organisations. The `organisationType` field is mapped to funder types (e.g., `nhs-trust` → NHS, `local-authority` → Local Government). Both exact and fuzzy matching (Jaro-Winkler, threshold ≥ 0.90) are used.
- TCSS Organisation Register** — funders that match the Organisation Register are classified as **CSO** (a civil society organisation acting as a funder).

### Layer 3: Keyword Rules

Remaining unclassified funders are matched using pattern-matching rules applied to the funder name. Rules are applied in priority order; the first match wins:

- NHS** — names containing "NHS" combined with "TRUST", "CCG", "ICB", etc.
- UK Government** — known department abbreviations (FCDO, DFID, etc.) and patterns like "BRITISH EMBASSY", "SCOTTISH GOVERNMENT"
- Local Government** — names containing "CITY COUNCIL", "COUNTY COUNCIL", "BOROUGH COUNCIL", etc.
- Police, Fire and Rescue** — names containing "CONSTABULARY", "POLICE", "FIRE" + "RESCUE"
- Education Institution** — names containing "UNIVERSITY", "COLLEGE", "ACADEMY TRUST", school patterns
- CSO** — names ending in "CIC" or containing "TRUST" or "CHARITY" (after NHS and Academy Trusts have been captured)
- Private Sector** — commercial companies identified by the external lookups (registered companies that are not civil society organisations)
- Other** — all remaining unclassified funders

### Funder Type Taxonomy

| Funder Type           | Description                                                                  | Examples                                            |
|-----------------------|------------------------------------------------------------------------------|-----------------------------------------------------|
| UK Government         | Central government departments, agencies, and arm's-length bodies            | DEPARTMENT FOR EDUCATION, MINISTRY OF DEFENCE, DVLA |
| NHS                   | NHS trusts, clinical commissioning groups, integrated care boards            | NHS ENGLAND, BARTS HEALTH NHS TRUST, NHS HRAW CCG   |
| Local Government      | County, district, borough, and unitary councils; combined authorities        | MANCHESTER CITY COUNCIL, KENT COUNTY COUNCIL        |
| Education Institution | Universities, colleges, academy trusts, schools                              | UNIVERSITY OF OXFORD, HARRIS FEDERATION             |
| CSO                   | Civil society organisations acting as funders (grant-makers, intermediaries) | THE NATIONAL LOTTERY COMMUNITY FUND                 |

| Funder Type             | Description                                                                                                                                                                                                                 | Examples                                          |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------|
| Police, Fire and Rescue | Police forces, fire and rescue services                                                                                                                                                                                     | METROPOLITAN POLICE, LONDON FIRE BRIGADE          |
| Private Sector          | Commercial companies appearing as the paying body — typically procurement intermediaries, managed-service providers or housing companies acting on behalf of public bodies (identified mainly through the external lookups) | ATTAIN HEALTH MANAGEMENT SERVICES LTD, ATAMIS LTD |
| Other                   | Funders not classifiable into the above categories                                                                                                                                                                          | Various unclassified public bodies                |
| Junk/Invalid            | Clearly erroneous entries (numeric strings, hash tokens)                                                                                                                                                                    | 3149053, 37300                                    |

## A3. Supplier Matching & Alias Resolution

The raw spending data contains supplier names as entered by government departments — often inconsistent in spelling, abbreviation, and formatting. The pipeline matches these names to organisations in the TCSS Organisation Register to assign a standardised `uid` to each supplier.

### Matching Process

Matching proceeds in two stages:

1. **Exact matching** — supplier names are normalised (uppercased, punctuation removed, whitespace collapsed) and matched exactly against the Organisation Register.
2. **Fuzzy matching** — unmatched suppliers are compared to the Register using Jaro-Winkler string similarity. Matches with a similarity score  $\geq 0.90$  are accepted. This captures variations in spelling, abbreviation (e.g., “LTD” vs “LIMITED”), and minor data entry errors.

### Alias Resolution

After initial matching, the pipeline identifies potential aliases — cases where the same organisation appears under different supplier names. This is common when departments record the same supplier differently (e.g., “ST LUKE’S HOSPICE” vs “SAINT LUKES HOSPICE”).

Alias resolution proceeds in three steps:

1. **Candidate generation** (Script 03a) — deterministic rules identify supplier name pairs that may refer to the same organisation, based on shared UIDs, similar names, or overlapping funder relationships.
2. **Batch review** — candidate pairs are grouped into batches and reviewed using a combination of LLM-assisted classification and manual checks. Each pair is labelled as a confirmed alias or a false positive.
3. **Merge** (Scripts 03b–03c) — confirmed aliases are assembled into a validated alias file, and the supplier lookup is updated to consolidate duplicate entries under a single canonical record.

**Note:** The LLM review step occurs externally between Scripts 03a and 03b. In a fully automated run where reviewed batches already exist, all scripts execute in sequence without manual intervention.

## A4. Contracts Finder Records in the Payments Dataset

---

Contracts Finder (<https://www.contractsfinder.service.gov.uk/>) is the UK government's portal for public procurement opportunities. The TCSS project operates its own Contracts Finder collector ([https://github.com/uk-third-sector-database/contracts\\_finder](https://github.com/uk-third-sector-database/contracts_finder)) that scrapes awarded contract notices from the portal's API.

### Integration Process

Contracts Finder records are integrated into the procurement dataset through a crosswalk file ( `contracts-finder-crosswalk.csv` ) that links awarded contract notices to the main payment data. The crosswalk maps Contracts Finder notice identifiers and awarded amounts to the standardised format used by the rest of the dataset.

Unlike the payment-level data from Central Government and NHS sources, Contracts Finder provides contract-level information — each record represents an awarded contract rather than an individual payment. These records are assigned a `data_source` value of `Contracts Finder` or `contractsfinder` (reflecting different collection batches).

**Note:** Contracts Finder records account for a relatively small share of the dataset (1.9%, 16,940 rows) but contribute a disproportionate number of unique organisations (4,682 register-matched organisations), as they capture a broader range of contract awards that may not appear in the £25k+ payment transparency data. The complete contract-level data — all awarded notices, including those won by non-civil-society suppliers, with full contract metadata — is published as the companion Contracts Finder Records (<https://uk-third-sector-database.github.io/guidance/tcss-contracts-finder-guidance.html>) dataset.

## A5. Linking to Other TCSS Datasets

---

The procurement dataset can be linked to other datasets in the UK Third and Civil Society Sector Database (<https://uk-third-sector-database.github.io/data/>) using the `uid` field. This unique organisation identifier is consistent across all TCSS datasets, enabling researchers to enrich procurement records with organisation characteristics, financial data, and other information.

## Available Linkages

| Dataset                                                                                                                                                                                                                                                                                                                                                              | Join Key                                                | What It Adds                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| <a href="https://uk-third-sector-database.github.io/guidance/tcss-cic-statements-guidance.html">CIC Founding Purposes</a> (CIC 36/37 forms) ( <a href="https://uk-third-sector-database.github.io/guidance/tcss-cic-statements-guidance.html">https://uk-third-sector-database.github.io/guidance/tcss-cic-statements-guidance.html</a> )                            | uid                                                     | Community interest statements, beneficiary descriptions, and activity summaries for Community Interest Companies                                                                                          |

## Example: Linking to the Organisation Register

```
import pandas as pd

# Load datasets
procurement = pd.read_csv("cso-procurement-dataset-refined.csv")
spine = pd.read_csv("TSCS_spine.spine.csv")

# Link procurement records to organisation characteristics
merged = procurement.merge(
    spine[["uid", "organisationname", "postcode", "dateregistered"]],
    on="uid",
    how="left"
)

# Example: count procurement recipients by region (requires postcode lookup)
print(merged.groupby("postcode").size().sort_values(ascending=False).head(10))
```

## Example: Linking to Charity Financial Records

```
import pandas as pd

# Load datasets
procurement = pd.read_csv("cso-procurement-dataset-refined.csv")
charity_finance = pd.read_csv("cso-spine-charity-financial-history.csv")

# Filter procurement to charities only
charity_procurement = procurement[procurement["uid"].str.startswith(("GB-CHC", "GB-SC", "GB-NIC"))]

# Link to latest financial year
latest_finance = charity_finance.sort_values("fy").groupby("uid").last().reset_index()
merged = charity_procurement.merge(
    latest_finance[["uid", "inc", "exp"]],
    on="uid",
    how="left"
)

# Example: compare procurement spend to charity income
print(merged[["uid", "amount", "inc"]].head(10))
```

**Tip:** When linking datasets, use a `left` join from the procurement data to preserve all payment records, even if some organisations are not found in the target dataset. Check for missing values after the join to assess linkage coverage.
